1   ABSTRACT

2

3   A version control system for managing versioned files comprises a central server storing a

4   repository of the versioned files. At least one proxy is connected to the central server. Each

5   proxy includes a read-only cache for storing data from the repository. At least one client is

6   connected to each of the proxies. Modifications to the versioned files may only be made by the

7   central server.
